

Medication Policy

EYFS: 3.19, 3.44, 3.45, 3.46

At Dandelion Day Nursery and Kids Club we promote the good health of children attending the setting and take necessary steps to prevent the spread of infection (see sickness and illness policy). If a child requires medicine, we will obtain information about the child's needs for this, and will ensure this information is kept up to date.

We follow strict guidelines when dealing with medication of any kind in the setting and these are set out below.

Medication prescribed by a doctor, dentist, nurse or pharmacist

- Prescription medicine will only be given when prescribed by the above and for the person named on the bottle for the dosage stated.
- Medicines must be in their original containers with their instructions printed in English.
- Those with parental responsibility for any child requiring prescription medication should hand over the medication to a member of staff who will then note the details of the administration on the medication form on the Famly app, this will then need parents acknowledgement.
- The Famly permission is only acceptable for that brand name of medication and cannot be used for similar types of medication, e.g. if the course of antibiotics changes, a new form on Famly will need to be completed
- The dosage on the Famly permission is the only dosage that will be administered. We will not give a different dose unless a new form is completed
- Parents must notify us IMMEDIATELY if the child's circumstances change, e.g. a dose has been given at home, or a change in strength/dose needs to be given.
- The setting will not administer a dosage that exceeds the recommended dose on the instructions unless accompanied by written instructions from a relevant health professional such as a letter from a doctor or dentist
- The parent must be asked when the child has last been given the medication before coming to the setting; and the staff member must record this information on the medication form on Famly
- At the time of administering the medicine, a member of staff will ask the child to take the medicine, at the prescribed time and in the prescribed form. (It is important to note that staff working with children are not legally obliged to administer medication)
- If the child refuses to take the appropriate medication, then a note will be made on the form
- Where medication is "essential" or may have side effects, discussion with the parent will take place to establish the appropriate response.

Non-prescription medication

The nursery will not administer any non-prescription medication containing aspirin

- The setting will only administer non-prescription medication e.g. liquid paracetamol for a short initial period, dependant on the medication or the condition of the child. After this time medical attention should be sought
- If the setting feels the child would benefit from medical attention rather than non-prescription medication, we reserve the right to refuse care until the child is seen by a medical practitioner
- On registration, parents will be asked if they would like to fill out a medication form to consent to their child being given a specific type of liquid paracetamol or anti-histamine in particular circumstances such as an increase in the child's temperature or a wasp or bee sting. This form will state the dose to be given, the circumstances in which this can be given e.g. the temperature increase of their child, the specific brand name or type of non-prescription medication and a signed statement to say that this may be administered in an emergency if the setting CANNOT contact the parent
- An emergency setting supply of fever relief (e.g. Calpol) and anti-histamines (e.g. Piriton) will be stored on site. This will be checked at regular intervals by the designated trained first aider to make sure that it complies with any instructions for storage and is still in date
- If a child does exhibit the symptoms for which consent has been given to give non-prescription medication during the day, the setting will make every attempt to contact the child's parents. Where parents cannot be contacted then the setting manager will take the decision as to whether the child is safe to have this medication based on the time the child has been in the setting, the circumstances surrounding the need for this medication and the medical history of the child on their registration form.
- Giving non-prescription medication will be a last resort and the nursery staff will use other methods first to try and alleviate the symptoms (where appropriate). The child will be closely monitored until the parents collect the child
- For any non-prescription cream for skin conditions e.g. Sudocreme, these can be administered as and when needed.
- If any child is brought to the setting in a condition in which he/she may require medication sometime during the day, the staff will decide if the child is fit to be left at the setting. If the child is staying, the parent must be asked if any kind of medication has already been given, at what time and in what dosage and this must be stated on the medication form on Family.
- As with any kind of medication, staff will ensure that the parent is informed of any non-prescription medicines given to the child whilst in the setting, together with the times and dosage given
- The setting DOES NOT administer any medication unless prior written consent is given for each and every medicine.
- Staff have the right to turn away any children they do not feel are fit to attend the setting based on the information they have been given during drop off e.g. High temperature
- Parents should not withdraw from giving their children prescribed medication and this should be brought to the setting for the staff to administer following the information given. **Any delay in providing medication prescribed by a GP**

or Healthcare Professional may be taken as a form of neglect and the safeguarding policy may be enforced.

Injections, pessaries, suppositories

As the administration of injections, pessaries and suppositories represents intrusive nursing, we will not administer these without appropriate medical training for every member of staff caring for this child. This training is specific for each child and not generic. The setting will do all it can to make any reasonable adjustments including working with parents and other professionals to arrange for appropriate health officials to train staff in administering the medication.

Staff medication

All staff have a responsibility to work with children only where they are fit to do so. Staff must not work with children where they are infectious or too unwell to meet children's needs. This includes circumstances where any medication taken affects their ability to care for children, for example, where it makes a person drowsy.

If any staff member believes that their condition, including any condition caused by taking medication, is affecting their ability they must inform their line manager and seek medical advice. The setting manager will decide if a staff member is fit to work, including circumstances where other staff members notice changes in behaviour i.e. suggesting a person may be under the influence of medication. This decision will include any medical advice obtained by the individual.

Where staff may occasionally or regularly need medication, any such medication must be kept in the person's locker/separate locked container in the staff room or nursery room where staff may need easy access to the medication such as an asthma inhaler. In all cases it must be stored out of reach of the children. It must not be kept in the first aid box and should be labelled with the name of the member of staff.

Storage

All medication for children must have the child's name clearly written on the original container and kept in a closed box, which is out of reach of all children.

Emergency medication, such as inhalers and EpiPens, will be within easy reach of staff in case of an immediate need, but will remain out of children's reach. Any antibiotics requiring refrigeration must be kept in a fridge inaccessible to children.

All medications must be in their original containers, labels must be legible and not tampered with or they will not be given. All prescription medications should have the pharmacist's details and notes attached to show the dosage needed and the date the prescription was issued. This will all be checked, along with expiry dates, before staff agree to administer medication.
